

1. Q is between P and R. Find PR and PQ.

PR = \_\_\_\_\_  
 PQ = \_\_\_\_\_

2. E is the midpoint of segment DF. DE =  $9x$  and EF =  $4x + 10$ . Find DE, EF, and DF.

DE = \_\_\_\_\_  
 EF = \_\_\_\_\_  
 DF = \_\_\_\_\_

3.  $\overrightarrow{NP}$  bisects  $\angle MNQ$ ,  
 $m\angle MNP = (6x - 12)^\circ$ ,  
 and  $m\angle PNQ = (4x + 8)^\circ$ .  
 Find  $m\angle MNQ$ .

$m\angle MNQ =$  \_\_\_\_\_

4. Write the rule for the transformation.

5. Find the value of x, y and z.

6. Solve for  $\angle f$  and each other angle that has information in it.

7. Find  $m\angle 1$

8. Find the measure of each missing angle

9. Find the value of  $x$ .

10. Find the value of  $x$  and  $y$  and each angle measure.

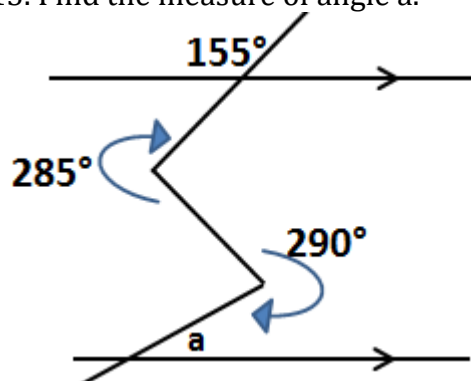

11. Find the value of  $x$  and  $y$ .

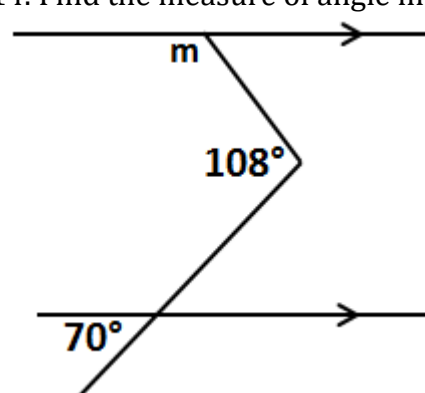

12. Find the value of  $x$  and  $y$ .

13. Find the measure of angle  $a$ .

14. Find the measure of angle  $m$ .

15. Rotate the figure  $90^\circ$  clockwise around the origin. Write the coordinate rule for the transformation:

16. Reflect the figure over the line  $y = x$ . Write the coordinate rule for the transformation:

17. Rotate the figure  $90^\circ$  counterclockwise around the origin. Write the coordinate rule for the transformation:

18. Rotate the figure  $180^\circ$  around the origin. Write the coordinate rule for the transformation:

19. Reflect the figure over the y-axis. Write the coordinate rule for the transformation:

20. Apply the transformation:  
 $(x, y) \rightarrow (x - 5, y - 2)$

Constructions

21. Draw a  $65^\circ$  angle
- Label it  $\angle MPO$
  - Use a compass to copy the angle to  $\angle M'P'O'$
  - Bisect the original angle using a compass
  - Mark any congruent parts

22. Draw segment  $AB = 14$  cm
- Create the perpendicular bisector of segment  $AB$  using a compass
  - Label the midpoint as  $R$
  - Mark any congruent parts on segment  $AB$ .

23. Use your compass to construct an equilateral triangle.
- Mark any congruent parts.
- Give specific instructions that would tell someone else how to create an equilateral triangle.
